Note. Coverage of the demographic data varied between 472–494 in the original sample, 394–416 in the early LGC model sample, 98–104 at 24 months, 105–111 at 36 months, 232–249 at 55 months, 98–102 at 63 months, and 219–235 in the first grade. The percentages are calculated from the available data. LGC = latent growth curve.

^aAt time of initial recruitment. ^bSignificantly different compared to the original sample ($p < .01$).
