

#### Supplemental Material S4. Partner session fidelity rating form.

Rating Parameter	Target to Maintain Fidelity to Protocol
1. Number of phonemic cues provided by partner	0
2. Number of semantic cues provided by partner	0
3. Number of suggestions for alternative strategies by partner	0
4. Number of correct production sequences requested by partner (i.e., request for correct word production)	0
5. Number of test questions asked by partner (asking questions which the partner already knows the answer to)	0
6. Number of times the partner requests verbal production of effective nonverbal communication	0
7. Does a question/answer routine occur for 5 consecutive cycles without any comments or elaboration from either partner (i.e., is the interaction becoming interview-like)?	NO
8. Does the partner share at least 2 personal vignettes, stories, comments? May be as short as 1 utterance each, e.g., "Oh, I love going to the movies too," etc.	YES
9. Does the partner make use of back-channeling devices (mhm, head nods, yeah, etc.) at least 10 times?	YES

*Note.* Any single utterance or turn in the entire conversation not meeting the target response is scored (-); e.g., if partner provides even one phonemic cue, #1 is scored (-), and percent session fidelity is 8/9, 89%.
