

**Supplemental Material S2.** Audiological characteristics of the sample.

<b>Laterality</b>	<b>Amplification</b>	<b>Degree (better ear; dB HL)</b>	<b>Degree (worse ear; dB HL)</b>	<b>Age of amplification (months)</b>	<b>Age of implantation (months)</b>
Bilateral	CI	85.60	89.79	11.29	14.12
Bilateral	HA	47.51	56.28	8.18	
Bilateral	none	49.67	53.65		
Unilateral	HA	4.70	54.09	9.91	
Unilateral	none	2.50	71.55	8.50	

*Note.* First two columns describe laterality and amplification type: cochlear implant (CI), hearing aid (HA), or none. Mean decibels of hearing loss (HL) in better ear, worse ear, and the mean age (in months) of amplification, and cochlear implantation (when applicable) for each laterality and amplification combination.
