

Supplemental Material S8. Metrical Pacing Therapy protocol.

Metrical Pacing Therapy	
Coded session number	
General observations	Plus/minus
All 16 targets were treated during the session	
The clinician was sitting facing the participant	
There was minimal background noise or distraction during the session.	
Specific cues provided when participant was having difficulty (as seen below)	
Target pacing signal presented at least 6x	
Target utterance produced aloud by clinician at least 3x	
Target utterance produced aloud by the participant across at least 1 repetition of the pacing loop	
Any explicit feedback related to articulation of production (e.g., "Try that sound again")? Provide number of trials.	
Measure	Number
Duration of treatment session	
Number of trials offered in the treatment session	
Any trials without visual feedback? Provide number of trials.	
Additional Comments	
<p style="text-align: center;">Potential cues</p> <ol style="list-style-type: none"> 1. Provide hand tapping on table or participant's arm for syllabic onset. 2. Produce the target in unison with participant. 3. Reduce the signal rate for the participant.
