

Supplemental Material S8. Significant evidence and effectiveness beliefs and discontinuation tendencies.

This tables highlights the significant ($p < .001$) interaction between SLPs beliefs regarding evidence and effectiveness and their tendency to discontinue the TL treatment.

Those who most agree that TL is an evidence-based intervention are less likely to discontinue TL intervention under this circumstance	Mean Disagree	Mean Neither agree nor disagree	Mean Agree
The PwD is dehydrated	2.8	2.5	2.3
Quality of life negatively impacted	2.9	2.7	2.7
Implementation of other treatment options	2.8	2.5	2.2
Non-compliance with recommendation by PwD/carer	2.6	2.3	2.1
The PwD wishes to discontinue TL	2.9	2.8	2.6
PwD is discharged from hospital/care	1.9	1.6	1.4
Those who most agree that TL is an effective intervention are less likely to discontinue TL intervention under this circumstance			
The PwD is dehydrated	2.8	2.6	2.3
Implementation of other treatment options	2.8	2.5	2.3
Non-compliance with recommendation by PwD/carer	2.6	2.3	2.2
The PwD wishes to discontinue TL	3.0	2.8	2.7
PwD is discharged from hospital/care	2.0	1.6	1.4
