

Supplemental Material S2. Significant SLP beliefs and propensity to recommend TL.

This table highlights significant findings ($p < .001$) regarding the interaction of SLPs propensity to recommend TL and their beliefs regarding the intervention.

Those who most often and sometimes recommend TL are more likely to agree with the following statements:	Mean Seldom/Never Recommend	Mean Sometimes Recommend	Mean Frequently/Always Recommend
TL is an evidence-based intervention	1.6	2.2	2.4
TL is an effective treatment	1.7	2.4	2.8
TL is supported by clinical evidence	1.7	2.3	2.4
TL prevents/reduces aspiration	1.5	2.1	2.6
TL should be the standard of care for treatment of aspiration	1.1	1.3	1.5
TL is the best available treatment for aspiration	1.1	1.3	1.6
I have a duty of care to provide TL to patients who are aspirating	1.2	1.6	2.1
TL makes swallowing safer	1.6	2.3	2.1
TL prevents pneumonia	1.2	1.6	2.0
There are no better options to TL	1.1	1.6	1.9
TL ensures PwD get some oral intake	1.7	2.3	2.7
TL aligns with neuroplasticity principles	1.3	1.7	1.9
I would choose TL for my family member	1.6	2.4	2.5
I would choose TL for myself if needed	1.4	2.0	2.0
I would recommend TL even if the PwD/family do not want it	1.1	1.6	1.8
Most PwD are happy with TL	1.1	1.5	1.6
Most patients adhere to TL recommendations	1.3	1.8	1.9
TL provides comfort for the family	1.7	2.1	2.3
TL reduces stress/discomfort of drinking	1.8	2.3	2.5
TL improves quality of life for PwD	1.5	2.0	2.0
