

# **Supplemental Material S1. Reliability of coded variables.**

Variable	ICC	<i>n</i> (%)	<i>p</i>	Interpretation
<i>Time 1 (Predictors of Interest)</i>				
Responding to Joint Attention	.835	15 (29%)	< .001	Good
Intentional Communication	.916	10 (20%)	< .001	Excellent
Number of Consonants	.771	15 (29%)	< .001	Good
Communication Acts Using a Consonant	.947	14 (27%)	< .001	Excellent
<i>Time 2 (Expressive Language)</i>				
Mean Length of Utterance (MLU)	.972	9 (18%)	< .001	Excellent
Number of Different Words (NDW)	.973	9 (18%)	< .001	Excellent

*Note.* Time 1 = 12-18 months; Time 2 = 9 months later (i.e., 21-27 months); ICC = intraclass correlation coefficient; *n* = number of participants (out of total *N* = 51; i.e., %) for whom reliability was conducted. Interpretation based on Koo and Li (2016).
