

### Supplemental Material S3. Eligible items by category (sample).

Eligible items were determined based on naming task performance (see Supplemental Material S2). In order to qualify for treatment, a category was required to minimally contain 10 eligible items (to allow for generating both a five-item treatment list and a five-item untreated semantically related list to assess within-category generalization). In this example, five categories met this criterion (light green) and final list selection was determined based on participant preference (in bold).

4-Legged Animals	7
Birds	6
Fruits & Vegetables	19
<b>Musical Instruments</b>	<b>13</b>
Occupations	9
<b>Sports Equipment</b>	<b>14</b>
<b>Tools</b>	<b>18</b>
Transportation	11
