Supplemental Material S4. Frequency (rate) of errors collapsing across clause types.

Age	TL	LI
4-Year-Olds	26 (0.008)	16 (0.027)
5-Year-Olds	19 (0.005)	18 (0.018)
6-Year-Olds	15 (0.004)	17 (0.022)
7-Year-Olds	14 (0.004)	15 (0.015)
8-Year-Olds	10 (0.003)	7 (0.006)
9-Year-Olds	6 (0.002)	1 (0.001)

Note. TL = typical language; LI = language impairment. Rate was computed by total number of errors divided by total number of C-units collapsing all children and clause types. Total number of C-units for the TL and LI groups by age can be found in Supplemental Material S3.
