Notes:

- The pattern matrix table shows regression coefficients which, in the case of oblique rotations, are not equivalent to correlations and, therefore, are not constrained to be less than 1.
- Please see Supplementary Table S1 for variable acronyms.
- **Gram Comp** = Grammatical Complexity; **Phrase Bldg** = Phrase Building; **Sem Anom** = Semantic Anomaly; **Gram Err** = Grammatical Errors; **Narr Prod** = Narrative Productivity; **Repair** = Repair.
- **h2** = communalities; **com** = variable complexity (degree of cross-loading).
