*Note.* ASD = Autism spectrum disorder; DD = Developmental delay without ASD; TD = Typical development. Means in the same row with different subscripts (a, b, and c) differ significantly,  $p < .05$ .

<sup>d</sup> Effect size based on Cohen's  $d = .20$  is small,  $.50$  is medium, and  $.80$  is large.

\*  $p < .05$ . \*\*  $p < .01$ . \*\*\*  $p < .001$ .
