

Description of lists Exp. 1-2

There were no more than three of a given trial type in a row, no more than three expected “different” or “same” responses in a row, and no repeats of a recording from any trial to the next trial. Across lists, all possible different-consonant and different-vowel stimulus pairs occurred equally often, and both orders of a stimulus pair (deev-teev vs. teev-deev) occurred equally often. Sixteen maximally-different word pairs were used, 8 per list.

Supplemental Material S4. All test lists for Experiments 1 and 2.

Note. Ident = identical; diffC = different consonants; diffV = different vowels; dstnt = dissimilar words. The number 2 is a second recording of the target word.
