

Supplemental Material S1. Articulation disorder status and associated speech error frequency.

Children with articulation disorders		<i>n</i> (%)
Participants with standardized single-word testing results		49 (87.5%)
GFTA-3 Results:		
Children with articulation disorders (score < 84 on GFTA-3)		32 (65%)
Children with age-appropriate speech (score ≥ 85 on GFTA-3)		17 (35%)
Speech error frequency according to articulation disorder status		
Group	Total errors <i>M</i> (<i>SD</i>)	Phonological errors <i>M</i> (<i>SD</i>)
Children with articulation disorders (score < 84 on GFTA-3)	21.78 (10.04)	11.28 (5.81)
Children with age-appropriate speech (score ≥ 85 on GFTA-3)	10.35 (6.62)	5.59 (4.18)

Note. GFTA-3 = Goldman-Fristoe Test of Articulation–Third Edition (Goldman & Fristoe, 2015).
